5 Ways to Manage Business Debt
WE’VE TAUGHT AN OLD “DAWG” NEW TRICKS

In addition to the innovation, high quality and broad product offering associated with the IP line of plate clamps, clamps provide several key benefits only available from Crosby.

• **One Stop Shopping** – Clamps are now a part of the most complete product line available in the industry.

• **Industry Leading Training** – IP’s Quality training materials have been upgraded to Crosby’s standards, the industry standard.

• **Industry Leading Support** – The industry’s leading customer service department, field sales staff and technical support.

“A Strong Grip on Performance with Uncompromising Quality”

More Important Than Ever Value For Your Money

Dear AWRF Members,

Times are tough, especially after a few years of rapid sales growth, resulting in record setting revenue results for a lot of our member companies. Most of us have had to adjust from the frantic pace of 2008 to a much more sedate climate, punctuated by uncertainty about the future of previously assumed secure projects. Rising inventory levels combined with falling call volume seems to be everyone’s issue.

As an industry association we have to be cognizant of these developments and we want to be proactive to ensure member retention and maybe even membership growth during these trying times.

That means one thing, foremost: MEMBER SERVICES

During our recent board meeting in Carlsbad, California, that topic dominated much of the discussions. We want to make sure that you, as members, get tangible benefits for your money spent with the association. This is true for both dues paid, as well as convention participation.

Let me highlight just a few of the projects your Board of Directors and numerous volunteers are working on to assist you in running a successful and profitable business:

- The AWRF HSE Committee (Health, Safety and Environment, formerly just Safety), has added another facet to its scope: Q for Quality. While the daunting task of a comprehensive QHSE manual is getting closer to being accomplished, several avenues of a “quality assurance program” through AWRF are being explored. Upon completion of the manual, it will be available for downloading by all member companies for free.

Additionally, take a look at the Lending Library now ready for your use. A listing of available shop safety videos can be found in this publication, complete with an established check-out procedure.

- The Board has authorized the Data Gathering Committee to disseminate a one-time release to the whole membership of the most recent results of the Employee Compensation Survey, as well as the Profit Survey. We hope to encourage increased participation for the upcoming Profit Survey this year by giving you a look at the valuable information you will receive in return and by showing you the level of confidentiality your personal information will receive.

- The Technical Committee always deserves special mention. This group of dedicated individuals spends an immense amount of personal time on projects affecting your businesses on a daily basis. In the near future you will receive the latest edition of ASME B30.21, Manually Lever Operated Hoists, as well as the new AWRF Swager Safety Guide through this committee. One of the committee’s next RP&Gs will be on the Inspection of Wire Rope Slings, a topic near and dear to most of us.

- I am pleased to welcome, hopefully, many of you to our spring convention in beautiful Austin, Texas. For those of you, who have not been to Austin, it is one of the fastest growing residential and commercial cities in

Our Business is Picking Up

with our mobile crane blocks & bridge crane blocks.

You can count on our reputation, experience and proven dependability for the right crane block to lift your business. Renfroe Too Crane Blocks featuring:

- Through the shaft, sheave bearing lubrication
- Standard single point alloy swiveling hook with latch
- Double and quad hooks available
- Single and multiple sheave configurations
- Sheaves available with bronze bushings, straight roller bearings or tapered roller bearings.

Committee Members.

During the 111th Session of the U.S. Congress (2009), members of the AWRF Government Affairs Committee (GAC) are as follows: J. Barry Epperson; Jeff Gilbert, Association Chief Executive; Don Pellow, Pellow Engineering Services; Tom Miller, Marcal Rope & Rigging; Dennis St. Germain, I&I Sling, Inc.; Gary O'Rourke, Strider Resource; Ron Raymond, J.C. Renfroe & Sons; Knut Buschmann, Unirope Limited; and Mike Gelsky, Lift-It Manufacturing Company.

ASAE Fly In

The annual American Society of Associations (ASAE) Fly In will be held in Washington, D.C. on March 31 and April 1, 2009, at which time we will join with representatives of over 100 non-profit associations to celebrate 2009 American Association Day. After thorough briefings, our delegation will ascend upon Capitol Hill to lobby for the perpetuation of the association community by sharing our collective views with members of Congress regarding the contributions to society of non-profit organizations. More particularly it is our opportunity to make a difference in health care reform. The recently proposed Small Business CHOICE Act (H.R. 859) would allow associations such as AWRF to create “small business pools” to resist the prospect of obscene health care insurance premium rate increases, with the goal of stabilizing overall health care costs. AWRF supports this legislation.

Small Business Summit

The GAC will hold its annual Washington, D.C. Briefing in conjunction with the U.S. Chamber of Commerce’s largest member event, America’s Small Business Summit 2009. From May 11th through May 13th we will participate in policy and management sessions; network with other small business owners, issue experts and Washington insiders; receive details of the new administration’s policies regarding simplified union organization (more below), taxes and other business issues impacting AWRF members. Finally, we will meet with congressional representatives to share the policy concerns of the rigging industry. For registration information, contact J. Barry Epperson at (918) 585-5641.

Defining Our Unique Industry.

Over the years, the GAC has periodically revised its White Paper which uniquely sets apart our industry from all others as “the lifting, rigging and load securement industry”. After many years of experience, AWRF now stands as the principal spokesman for this industry. Recent developments at the American Society of Mechanical Engineering (ASME), (the preeminent standards writing organization affecting AWRF members), have prompted a reexamination of the above definition. At their regular meeting on the B. 30 Committee of ASME directed its sub-committee to revise all references to the term “lifting” in their standards to the more comprehensive term, “load handling”. Implicit are the requirements of adapting and revising standards to take into consideration horizontal and oblique movements of loads as well as the concept of load pulling. The advent of products such as air mats and industrial skates, etc. have contributed to the expanded approach to and treatment of the relocation of loads. So long as HP = 550 ft–lb/sec and gravity = 32 ft/sec2, AWRF members will be called upon to provide solutions to problems involving the confluence of friction and gravity as these factors relate to the dynamics of industrial load movement. Should we now be known as the lifting, pulling, sliding, towing, extracting, side loading, scooting, unching, rigging and load securement industry?

C-DAC.

The revised OSHA Standard for Cranes and Derricks Used In Construction is recorded at 29 CFR 1926 550. The collection and assimilation of final comments ended on December 8, 2008. During the development of this standard, the GAC attended several negotiated rulemaking sessions, offering expertise and technical assistance in the areas of lifting, rigging and load securement. The trade association leader in this process has been the Specialized Carriers and Riggers Association (SC & RA), an international non-profit organization with approximately 1,300 members from 43 countries. SC & RA member companies provide expertise in specialized transportation, machinery moving and erecting, industrial maintenance, millwrighting, crane and rigging operations (including tower cranes), manufacturing and rental. The AWRF Technical Committee has extended an invitation to Beth O’Quinn, SC & RA Vice President of Construction, to speak on the subject of C-DAC at the AWRF fall convention in October, 2009.

Swager Guarding.

The GAC met with OSHA safety officials on November 17, 2008 to deliver multiple copies of the AWRF Swager Safety Guide (SSG), and to galvanize our understanding
with the U.S. Department of Labor (DOL) with respect to the safety advantages of the AWRF program over the often untenable concept of barrier guarding. Previously, on June 4, 2008, OSHA issued advanced notice of a proposed revision to the current standard involving the potential of automatic inclusion of swagers within the DOL classification of power presses which clearly require barrier guarding. Throughout the coming months, the GAC will continue to emphasize to OSHA the vast distinctions between swaging machines and power presses. We will vigorously promote the SSG as a viable alternative to point of contact barrier guarding.

**Union Card Check.**

Last year, Senate Bill 1041, the “Employer Free Choice Act” was introduced by Senator Ted Kennedy (D-MA) on March 29, 2007. Co-sponsored by 46 colleagues, the “Card Check Act” would have required the National Labor Relations Board (NLRB) to certify a bargaining representative (union) without an election, if a majority of the eligible employees have checked a box on a card. If passed, this legislation would have eliminated the private ballot, permitting union organizers to pressure workers into publicly signing cards in their support. Small businesses are particularly vulnerable because of the prospective legal costs in fighting union takeovers. Although the bill stalled in the 110th Congress, 2009 promises to be a pivotal year for non-unionized AWRF members who can expect anti-business campaigns promoting legislation facilitating mini-union (non-majority) bargaining units, expansion of the Family and Medical Leave Act (FMLA) to the smallest businesses, criminalization of OSHA violations and revived mandatory ergonomics requirements. As the eyes and ears of the Association on Capitol Hill, your AWRF Government Affairs Committee will continue to be vigilant and proactive in the promotion of regulatory and legislative measures which benefit the industry, and in the obstruction of any such initiatives which promise to burden our members, such as the proposed card check legislation.

**Infrastructure.**

On February 21, 2009, members of the AWRF Technical Committee voted unanimously to invite Janet Kavinoky of the U.S. Chamber of Commerce to be a guest speaker at the 2009 fall meeting in Orlando, Florida. As one of the country’s foremost infrastructure experts, Ms. Kavinoky has been asked to address the status of our transportation system as such relates to the lifting, rigging and load securement industry.

**Death Tax Repeal.**

The new administration has made clear its legislative intent regarding the U.S. federal estate tax. Page 121 of the new administration’s budget released in late February, under “Summary Tables” in footnote number one states, “... the estate tax is maintained at its 2009 parameters,” i.e., $3,500,000.00 per person. Revenue estimates appear at page 119 of the same document. On February 13, 2009, U.S. Representative Adrian Smith (R-Nebraska) issued the following message in opposition to the “egregious” federal estate tax:

- The tax strikes most heavily at small and medium-sized family-owned businesses, often requiring partial or total liquidation on the death of the owner.
- The bicameral Joint Economic Committee (JEC) found that the death tax reduced the stock of capital in the U.S. economy by $847 billion - approximately the size of the Obama stimulus plan.
- In 2006, the Death Tax Repeal Permanency Act was passed by the U.S. House of Representatives but fell three votes short in the Senate.
- As 2010 approaches, there is increased urgency to insure the permanent phase out of the death tax.
- There is no reason why family farms, ranches and businesses must implode because of a tax adopted in 1916 to pay for World War I.

**Message from Treasurer**

With the economic downturn predicted to last 12-24 months, the board of directors met in January to discuss budget proposals for the upcoming year. Each committee chair submitted their budget requests for the year 2009. After much discussion, a conservative budget was adopted for the upcoming year. Due to the generous support of our membership with donations, timely dues payments, and convention attendance, AWRF expects to continue to offer technical information and exceptional speakers at our conventions while the economy works thru the current downturn. Our scholarship fund remains strong as do our reserves.

Our finances were audited in Dec. 2008 by an outside accounting firm and we were considered to be in good shape. The BODs will continue to watch our budgets as we move forward in 2009.

Greetings from the Long Range Planning Committee. Once again, we have started a new year; only this year we face the prospect of a prolonged national recession which may be the worst in many decades. Even with this said, I wanted to inform you that the Board of Directors is still hard at work. Many members volunteer their time and money helping the Association remain strong.

We had our winter board meeting and reviewed each committee’s status. The year-end reports were presented and showed that each committee is on target with their Plan of Action. Each committee turned in their budget requests and all were approved, resulting in a balanced budget. The money was allocated to the committees. Each committee is reviewing and updating their 3-5 year plan which will be submitted to the Long Range Planning Committee for consolidation prior to the summer board meeting.

As Vice President of the Association and Chairman of the Long Range Planning Committee, I am tasked with developing and summarizing the plan, along with presenting new ideas or suggestions from AWRF members for consideration by the Board of Directors. With that said, if any AWRF member has any ideas or suggestions, please contact me by emailing me at jeff.bishop@lifting.com.
TAKING THE BURDEN OFF THE WORKINGMAN SINCE 1948.

NOTHING LASTS LIKE THERN. Thern winches, hoists and cranes are built to endure decades of line pulling, load lifting and equipment positioning. They’re durable and powerful, and can be easily customized to meet the rigors of manufacturing, from pulling carts to lifting doors to loading equipment. It’s for these reasons that America’s plant engineers and operators turn to Thern when there’s backbreaking work to be done.

Call 1.800.843.7648 or visit www.thern.com/manufacturing.
Health Care Reform in 2009

“Let there be no doubt: health care reform cannot wait, it must not wait, and it will not wait another year.”

President Obama made this bold promise to hopeful Americans in his recent address to Congress. Few listeners debate the importance of health care, but providing quality affordable health care for every American will clearly challenge Democrats and Republicans to work together to meet this goal.

As unemployment rises, even fewer Americans will have health insurance through an employer. And, rising medical costs are forcing small and large businesses to reduce coverage, increase co-pays and deductibles and raise the amount that employees must pay each month. Some small business owners have even converted traditional health insurance plans to high deductible plans.

AWRF offers these tips for evaluating your health care options and saving money on your medical bills.

My employer offers an HMO and a PPO. How do I decide? Both provide excellent care, but you may want to choose an HMO if its network of doctors and hospitals matches your needs. Health insurance with a Health Maintenance Organization (HMO) is generally less expensive. You’re required to select an HMO physician to be your primary health care provider. This doctor will coordinate all of your medical care, including referrals to specialists within your HMO network. If you seek treatment from a non-network physician, you will generally pay most of the cost yourself.

A Preferred Provider Organization (PPO) is more flexible than an HMO plan, but it still operates with a list of physicians and hospitals that are “within the PPO network.” You may visit an out-of-network provider, but you will pay the difference between the PPO network and out-of-network prices. Both plans usually offer a prescription drug benefit, as well. Some companies are offering options that allow you to combine features of both HMO and PPO plans.

I can’t afford full health insurance, but I want coverage for major emergencies. A high deductible health insurance plan or catastrophic health insurance offer coverage for major illnesses or accidents. For example, a plan with a $5,000 deductible requires you to pay all of your medical expenses up to $5,000 before your insurer begins to pay. If you choose a high deductible plan, try to save a small amount of money each month in a Health Savings Account (HSA) so that you’re not overwhelmed by routine medical expenses.

I have health insurance, but it seems like I’m always paying for something. Sad but true. You may owe a co-payment for doctor’s visits or a trip to the ER. Usually, this is a flat fee, but it can get expensive if you don’t stay within your plan network.

Secondly, payment for expenses is subject to your annual deductible, which is the amount you pay toward your medical expenses before the insurance company begins to pay claims. Some HMO plans do not have deductibles but do have co-payments.

Lastly, there’s co-insurance, which is the percentage of your medical costs that you pay after you reach your annual deductible. 80/20 co-insurance is a common option, and that means that your insurer pays 80% of your bills and you pay 20%—after your deductible. So, anything you can do to reduce your medical bills will help you reduce your out-of-pocket expenses, too. I don’t have health insurance. What can I do? Almost every hospital has a financial aid office that will evaluate your personal situation and determine your ability to pay for required care. Generally, a hospital will provide sliding scale fees if your income is 400% or less of federal poverty limits and may eliminate bills entirely if your income is 200% or less of federal poverty limits. But hospitals have to make money, too, so they may not publicize these programs or provide much assistance in applying. Be prepared with recent copies of your tax returns and W-2’s to prove your need.
As of March 11, 2009 all the posters and applications are in the mail to each United States and Canadian member. The latest news is that we have a new scholarship to add to our group, bringing our total scholarships to six-$3000.00 scholarships. The latest addition is the Jurgen Prohaska Scholarship named after our 1992-93 AWRF President who passed away this fall. Jurgen was the Vice President of Sales for Kulkoni, in Houston, TX. I think he attended every AWRF meeting for 20 years. He will always be remembered as a real pioneer in the way wire rope is marketed in the United States. This scholarship has been fully funded by donations and will continue every year. The Larry Boeckel Memorial Scholarship was created by a group called the “sixteen guys”, in memory of their friend Larry who was the Marketing Manager for Campbell Chain. This is a small group of serious golfers who will meet on the course to fund this scholarship once again this year. And thru your generous donations AWRF continues to fund four scholarships. The drop dead date on these applications for your employee’s families is June 1, 2009. In this uncertain time, a $3000 AWRF Scholarship will be a welcomed addition to any student’s portfolio. “Children are our most valuable natural resource” according to Herbert Hoover, and now is the time with an AWRF scholarship to help them accomplish their goals.

John Rauh, Chairman /Cableworks, Inc.

Dear AWRF Members,

The global economy is a mess and seems to worsen daily. These days we all seek the most accurate and current information available in order to run our businesses more effectively. Your Data Gathering Committee has decided that due to these special circumstances, we will issue the 2008 Employee Compensation Report to ALL MEMBERS. This report compares rates by region and job level. These figures are from both AWRF member firms and over 1700 other types of industrial distributors in both the US and Canada. Usually, only those AWRF members who participate in these surveys receive the compiled data. However, the Board considers it imperative that all members receive the information this year. After each member has an opportunity to review the enclosed, we ask for and expect an increase in participation with our next survey.

Also, this year, ALL MEMBERS will receive the AWRF Profit Survey. This report shows how your financial numbers would compare to other member firms. When you participate in this report you receive direct comparisons compiled by the Profit Planning Group, which is a totally independent contractor based in Colorado. Your firm’s financial numbers are kept completely confidential! Please invest a little time to explore these two tools when received. It is our hope that AWRF Members find benefit from this program.

Sincerely,
Scott St. Germain
Data Gathering Chairman

Are you constantly on the phone or checking e-mail? Are there not enough hours in the day to get work done? Does everyone want their answer yesterday? Today, every customer wants ‘instant’ information and this leads all of us to have too much stress. Most health professionals would agree that we need to ‘lessen our stress level’.

The AWRF Tournament Committee understands and is here for you. So why not sign up for tennis, a fun-run or walk, or a round of golf at the next convention in Austin, Texas? What could be better than networking with your peers or suppliers or customers for a few hours and may be even winning a prize? Life is too short as it is, so don’t let these opportunities pass you by.

Bruce Yoder

When it matters.
With a change of hats, here is the status of the (Q) HSE Committee. The year-end review showed that all Plan of Action points have been successfully completed. We achieved higher participation with statistics gathering which helps determine the focus of the committee. The HSE manual is in the review stage and will be presented to the AWRF membership at the spring meeting. This has been a major undertaking by Jack Gibbons, Metro Wire Rope. When you have a chance, thank him for all of his hard work.

Jeff Gilbert told the committee that the use of the HSE DVD's has increased and that many members have commented that they are a real asset to the Association. If you haven't checked them out, please get with Jeff and help enhance your training requirements.

Finally, the committee is developing a Quality sub-committee. This sub-committee is a long range action point which will better differentiate AWRF members from non-members.

Quality & Performance

The Difference is BRIDON is a statement relating to a broad spectrum of “Value Added” features, which together aim to ensure Quality, Reliability and Customer Satisfaction. The following section has been designed to help you identify what precisely it is that differentiates BRIDON products from the competition.

Shared Knowledge

BRIDON believes it is important that our users are knowledgeable about the properties, installation, use, inspection and maintenance of our products. This belief has led BRIDON to offer both formal product-training seminars supported by relevant product safety and product data literature as well as specialist courses tailor-made to suit customer requirements.

Customer Service

The ‘Difference’ at BRIDON is service, which is second to none. Such excellence is achieved not only by having the product available when you want it, but by also providing a knowledgeable team of field sales representatives, a fully trained and capable Customer Services team dealing specifically with inquiries and orders supported by expert rope engineers. BRIDON products are available across the USA, Canada and around the world via a network of Distributors. For more information about any of these value added features, please contact your local BRIDON Distributor or BRIDON American Corporation direct.

The Difference is BRIDON AMERICAN

A Commitment to Quality

The ‘Difference’ is that BRIDON’s products are tested to destruction. This “Powercheck” enables us to satisfy ourselves that the maximum breaking strength has indeed been achieved or exceeded. Not all competitors carry out this test. Failure to meet the required minimum breaking force may mean that the design factor of safety for the equipment or machinery has been compromised.

Setting the Standard

BRIDON strives to 'set the standard' on both its domestic market and overseas. The achievement of such goals becomes apparent when many OEM’s specify and recommend BRIDON products, because “The Difference is BRIDON.”

Engineering Excellence

The majority of BRIDON’s products are manufactured with wires produced by BRIDON, using state of the art machinery. These wires are subsequently spun into strands and then closed into ropes specially designed to meet the strength and performance requirements demanded by our valued customer.

Endurance and Reliability

BRIDON products are time-tested and better able to withstand severe field applications as a result of the superior fatigue, crush resistance and rotational characteristics associated with all products within our high performance range.

TESTING MACHINES

- Heavy Duty Testing Machines, designed for the rigging industry
- Standard sizes or custom machines
- Upgrades for existing machines
- Software compatible with all RFID systems
- Worldwide Calibration Service for any testing machine
- Quality products and service since 1970

Horizontal Testing Machines 10,000 lbs. to 5,000,000 lbs. capacities - Any Length

Pre-Stretch Bed with Wire Rope Grips

Mobile Machines

Vertical Machines - Any Capacity

Wire Rope Grips - Any Size

For more than 20 years, our slings have been the premier rigging solutions for heavy lifts.

With overload tell-tails, fiber optics, and Check-Fast™ inspection systems, we offer our rigging customers the most advanced means of checking their Twin-Path® slings at the job site. Our durable K-Spec™ fiber is available in all our synthetic products. And we offer engineered protection for our synthetic slings with CornerMax™ Pads and Synthetic Armor Pads.

In addition to our synthetic products, we have three multi-part wire rope sling designs that achieve over 90% efficiency making them truly high performance wire rope slings. They are flexible and can be made to precise lengths.

All of this is backed up by the most extensive sling testing in our industry, a worldwide network of 40 sling fabrication locations, and a commitment to provide the highest quality rigging solutions for our customers.

Claims Are Nice, BUT ASK FOR PROOF!

Although they may look the same, when it comes to hoist rings, you truly get what you pay for. Insist on Jergens Hoist Rings: all are designed for a 5:1 strength factor; all material is domestically manufactured certified alloy steel. Forged or cast components are magnetic particle inspected to ASTM E709-80 with zero defects permissible.

Forged Center Pull
Full swivel and pivot action allows you to flip and turn parts without unhooking. Integral solid center brace lift ball Bolt design reduces possibility of spreading the lift ball in misapplications. 800 to 30,000 lb. capacities. U.S. patent 46,652,012.

Side Pull (Traditional)
Hoist Ring makes flipping of lifted items easy. Features oversized round ring and heavy-duty cast body. 650 to 29,000 lb. capacities. U.S. Patent 6,443,514.

Swivel EyeBolt™
Style has full swivel and pivot action. Patented tamper-resistant design is great for permanent mounting applications. 500 to 4,000 lb. capacities. Available in inch, metric and stainless steel. U.S. Patent 5,748,576.

Side Swivel™
Economical design for OEM applications. Full swivel and pivot action. 650 to 4,100 lb. capacities. U.S. Patent 6,443,514.

Jergens Hoist Rings
Center Pull style: 800 to 50,000 lbs. capacities.

• Each Hoist Ring pull-tested and certified to 200% of rated load capacity.
• Individual certificate of proof test accompanies each Hoist Ring.
• Clearly identified Data code stamped Individually boxed
• Inch/metric color coding Multi-lingual instructions included with each unit.

My mother always said, “It is darkest just before dawn,” while my dad, who ran a small business his whole life, was more of a “it’s darkest just before it goes pitch black!” kind of guy.

Looking at incoming data, I am not sure which parent was right! As I write this, we are on the verge of seeing an enormous stimulus package passed and signed into law—a package that will undoubtedly help boost the economy not because it is well crafted, targeted, timely, and temporary, which it is not, but because it is so darn big! In contrast, the credit markets are still locked up, and job losses are mounting, people are not spending, and nobody is investing. I still think that the economy will bottom out by the end of the summer and show a bit of growth toward year-end, but that may be more of a wish than a forecast.

The economy declined at a 3.8% annual rate in the fourth quarter, down from a more modest 0.5% decline in the third quarter and much less than many economists had forecast (see chart 1). While many news reports hailed the data as a sign that things were not as bad as believed, a closer look showed that the economy was likely weaker than the report and perhaps even weaker than expected.

Consumption declined in the fourth quarter at an annual rate of 3.5%, following a drop of 3.8% in the prior three months. Moreover, the monthly data did not seem to improve as the quarter progressed. Retail sales data for December decreased 3.0%, weekly chain store sales were weak, and the holiday spending season was a record bust. Orders for durable goods fell 2.6% in December from November’s level. We expect the impact of continued weakness in personal income, employment, housing, financial markets, and household wealth to depress consumption over at least the first half of this year.

Monthly data for the first quarter seem to confirm this dour outlook. Weekly chain store sales vacillated in January but finished up by 0.1% from December, but purchases of big ticket items were very weak. Vehicle sales were down 7.1% month to month in January to 9.5 million units, a level not seen since 1982 and nearly 40% below a year ago. Retail sales rose unexpectedly in January by 1.0%, following a six-month decline. Over the year, retail sales declined by 9.7%.

Business investment in the fourth quarter was even worse than consumption, declining by more than 19%. Purchases of equipment and software declined by a whopping 27.8% at an annual rate, continuing a string of abysmal numbers extending back to the start of 2008. Investment in structures decreased at a 1.8% annual rate in the fourth quarter, after rising 9.7% in the third quarter. With capacity utilization rates at 73.6%, we don’t expect much improvement going forward.

As if these numbers were not bad enough, the one area that we did not want to see grow, business inventories, increased dramatically—rising more than $36 billion in the fourth quarter. As a result, firms must work through these bulging stocks before additional production will be needed.

Residential investment declined by 23.6% at an annual rate in the fourth quarter and has been on a downward spiral since the first quarter of 2006. The housing market continues its long decline, and there is little reason to be optimistic. In the latest data, prices for both new and existing home sales declined, and sales of new homes fell rapidly. On a rare positive note, existing home sales increased, albeit not enough to offset the losses from the previous month. Despite rising affordability and low mortgage rates, this sector will likely continue to be a drag on the economy at least through the end of the summer.

Government consumption and investment contributed positively to GDP, but even here there is some weakness. Many state governments are facing budget deficits, and state and local spending contracted 0.5% after increasing in the previous two quarters. With passage of the stimulus package, government spending will become a major factor in the short-run resurgence in GDP growth.

For the past few quarters, net exports had been one of the bright spots in the economy, but a stronger dollar and weak growth abroad seem to have brought that to an end. Exports declined 19.7% in an annual rate in the last quarter of last year, while imports dropped by 15.7%. The result was an increase in the trade deficit by $3.3 billion. With the dollar stabilizing in the short term and growth abroad continuing to weaken, we expect trade to offer less support to GDP over the forecast.

Weak demand has continued to take its toll on the labor market. The economy lost 598,000 jobs in January, and estimates for previous months were revised downward as well (see chart 2). The economy lost nearly 3 million jobs in 2008 and has lost about 3.5 million jobs since the recession began in December 2007. About half of this decline has occurred in the past three months. The unemployment rate jumped from 7.2% to 7.6%.

Unfortunately, the situation does not look like it will improve anytime soon. Initial claims for unemployment have been trending up for the past few months and are currently approaching 600,000 on a four-week moving average basis.

The weak demand, together with the unwinding in energy prices, has created a deflationary environment. The consumer price index declined in December by 0.7%, the fifth consecutive decline, and finished down 0.1% from a year earlier. Core prices, net of food and energy, also
declined in the most recent data, but they are still up 1.7% from a year ago. Clearly, inflation is not a concern at this time, and policymakers and financial markets are shifting focus to the threat of prolonged deflation.

The Fed has acted aggressively to stem problems in financial and credit markets while also dealing with the downturn in the real economy. The Fed has slashed its federal funds rate target to between 0.0% and 0.25% and is focusing on more direct approaches to stimulate bank lending and overall demand.

Since August 2007, the Fed balance sheet has ballooned by more than $1 trillion to almost $2 trillion. The Fed has created a plethora of programs to deal with the so-called toxic assets on banks’ balance sheets. For example, over this period, currency swap lines have increased by about $390 billion, the Term Auction Facility was developed and has purchased more than $410 billion of collateralized loans, and other programs have grown by a combined $190 billion.

To date, this increased liquidity has not noticeably impacted the real economy. The commercial banking system, still reeling from loan write-offs and liquidity constraints, is yet to pass on this increased liquidity, preferring, instead, to hold much of the Fed’s largesse in the form of sterile reserves. For example, prior to the calamity in the credit markets, the banking system generally held less than $2 billion in excess reserves. In the most recent period, excess reserves at commercial banks have swelled to almost $800 billion. Interestingly, this amount is down from a peak of almost $850 billion, indicating that the logjam in lending may be beginning to dissipate.

Other signs of improving credit markets are beginning to show as well. The Ted spread (the difference between the three-month London Interbank Offer Rate and three-month Treasury bills), which reached an all-time high on October 10, 2008, of more than 450 basis points, has narrowed to less than 100 basis points of late—still almost double its normal spread but moving in the right direction.

Nothing in our current data indicates an end to our current downturn, or even that we’ve reached a clear-cut bottom. However, the combined effects of the massive stimulus program and the remainder of the TARP funds should get us back on track, but considerable risks remain.

McKISSICK BLOCKS
QUALITY BUILT

Time tested and work proven.........

McKissick® blocks, overhaul balls and sheaves have been leading the way for more than 65 years, and have been utilized in the most demanding applications in every corner of the world. Only McKissick® offers world class products with unequaled service and customer support behind each one. Whether the items you require are standard off-the-shelf, or specially engineered, demand McKissick®........the original.

Dear AWRF Association Members,

When the call came requesting I pen a short message for this issue of SLINGMAKERS, I confess, I immediately knew the subject matter for this article would go far beyond the “happenings” of the AWRF Membership Committee. Yes, I could write several paragraphs about all the help and positive ideas I’ve received from Co-Chair Scott St. Germain, along with the unique computer graphic skills and ideas of Tim O’Rourke, in designing a new AWRF membership promotional brochure. However, I decided to take advantage of this opportunity to inform you, as members of the association, a little insight into a typical AWRF Board of Director’s meeting. At times, one may ask me with a genuine interest “what went on at the recent AWRF BOD meeting? (Forgive me fellow AWRF Committee Chairman … I’m going to Brag on all of you for a moment. )

First, let me assure all of you, thanks to our Executive Director Jeff Gilbert and assistant Karen VanZant, the meetings are structured with a well defined agenda for topics. The meetings always begin with the President striking the gavel that signals the start of a well organized, and sometimes “spirited” discussions. Next, we have the opportunity at the start of each meeting, to be reminded by Mr Barry Epperson / AWRF General Council, the very laws surrounding our AWRF Antitrust Policy. Particularly, as it pertains to the Sherman Act and Section Five of the Federal Trade Commission Act. Immediately following Barry’s “Lecture” (Forgive me Mr. Epperson) comes the presentations on queue by all committee Chairs. I won’t spend time here discussing the obvious reports to include treasurer’s, minutes, technical, scholarship, safety committee and PIE just to name a few. Trust me on this one… these folks are dedicating an unbelievable amount of volunteer time and energy for the betterment of AWRF. Forgive me… but may I also point out here…. these same folks play key roles already in their respective company positions. No excuses from any of them. Simply put.. they all get the job done.

However, I would like to shout from the rooftops….. the incredible energy, dedication, and commitment that your current AWRF Board of Directors display at every meeting. Please know you can be confident knowing current President Michael Rothermund, and AWRF fellow officers Vice President /Jeff Bishop, Secretary /Tom Miller, and Treasurer / Bruce Yoder are serving with dedication and a work ethic best described as exemplary. In addition, what also makes the BOD meetings so unique, is the open door policy for past AWRF Presidents to sit in on any meeting of their choice. I will only say that Mike Wallace / Chairman Past Presidents Council and numerous past Presidents attend regularly. Although, they are unable to cast a vote, they still offer invaluable input covering all meeting topics. On the subject of past Presidents, I would like to pass along a special salute ( I feel certain my thoughts are shared by all past and current AWRF Chairman) to Duane Kaminski. Duane’s years of experience and his recollection of past events, has proven priceless in the area of key decisions. More importantly, when Duane decides to speak up… there is a respectful silence that takes over the room. All board members eagerly listen to and are reminded of the underlying principles, in which AWRF was founded…

Speaking of dedication to AWRF…. Ever heard the name Knut Buschman ? No denying he’s a longtime member who maintains a current pulse on our entire industry.

In short, each of you as members should be proud of the AWRF organization. You can hold your head high knowing that your AWRF BOD constantly strives to make our general meetings memorable, presentations productive ( Go Mike Parham ) and constantly exploring ways to make certain that AWRF’S purpose will always remain…. sound and unshaken.

I’ll end by inviting each of you to encourage and enlist potential new AWRF members. I also challenge each of you to seriously consider taking pride in becoming a future AWRF Board Member. This will enable you to better understand, and ideally leave your own footprint on the legacy of AWRF.

Larry Lusk
Membership Chairman  AWRF

New: Swager Guarding

Strider-Resource, a division of The O’Rourke Marketing Corporation, has announced its next generation of universal swagers. These Smart Swagers™ are also available with Swager Guarding™.

Swager Guarding™ allows trained operators to swage wire rope slings without risk of injury caused by pinch points. New and innovative technology permits a full range of wire rope diameters to move freely within the swaging zone.

Smart Swagers™ incorporate a universal die pocket to accommodate both One Press® and multi-press dies. The control system counts and records the number of swages as well as any overloads. Alarms indicate if the oil levels are low and if the oil and filter need to be changed. Smart Swagers™ feature a stroke limiter mode and a hold mode for time and energy savings. This next generation of Smart Swager™ operates at a very low noise level of 60 - 68 decibels.

Swager Guarding™ and this new and innovative technology are available from Strider-Resource.

For more information, contact Tim O’Rourke.

TALURIT GROUP completes further expansion

TALURIT GROUP is continuing to thrive despite the troubles in the worldwide economic downturn. The head office in Gothenburg has increased the number of engineers and Talurit (UK) Ltd is expanding in Barnsley, UK.

On March 2nd Talurit (UK) Ltd takes possession of their new factory. The newly built office and much larger warehouse will store machines for the wire rope industry as well as ferrules from size 1 to 128. Service and refurbishing is a core business idea in the TALURIT GROUP. With the new improved premises in UK, the service facilities for the global market are improved and customers can expect a better service than ever.

Based in Gothenburg, Sweden, Talurit AB is head quarters for the TALURIT GROUP, with its two affiliates, Talurit (UK) Ltd and Gerro GmbH, Germany. From these three offices marketing, sales and service throughout the world is managed. Dedicated sales offices and workshops are found in Singapore, Hong Kong, Japan and Australia.

For more information about the Talurit AB or affiliates, please visit: www.talurit.com or call +46 31 709 30 80.

Jergens, Inc. Ball Lock™ Mounting System Speeds Accurate Locating and Locking of Fixture Plates and Subplates

Frees Valuable Machine Time With Quick-Change Capability

CLEVELAND, OHIO—January 15, 2009—The patented Ball Lock™ Mounting System from Jergens, Inc. is the practical quick-change system for fixturing in metalworking and metal-forming operations, for either horizontal or vertical machining centers. With the current trend toward smaller production runs, the ability to set up quickly for the next run is critical to maintaining profitability.

Jergens’ Ball Lock™ Mounting System speeds accurate locating and locking of fixture plates to subplates, freeing valuable machine time by providing quick-change capability. Employing the system generally takes only minutes and requires only a couple of turns of a set screw, versus the conventional method of dowel pins and cap screws that might need up to ten turns to lock.

Repeatability is ±0.0005”, which minimizes or eliminates the need to indicate fixture position. The Ball Lock™ System securely holds plates together with working loads up to 20,000 lbs., achieving its holding force by a combination of force generators. A threaded screw exerts force onto a center ball, which, in turn, directs this force onto three balls that register on a taper seat.

Jergens Vises and Tooling Columns are available with Ball Lock™ mounting systems, and various pre-engineered kits are available for many common machining centers. For applications and further information, see the Jergens Ball Lock™ Mounting System at www.jergensinc.com.

Founded in 1942, Jergens, Inc. has grown into four separate operating divisions providing superior engineered solutions and products: “The standard components with the highest standards.” The Jergens Difference might be better engineering or better service but the result is always the same—a better solution for our customers. Jergens is an ISO 9001:2000 certified company. For more information, please contact Jergens, Inc. at Jergens Way, 15700 S. Waterloo Road, Cleveland, OH 44110-3898. Phone: 216-486-5540 or toll free: 800-537-4367; Fax: 216-481-6193. On the Web: www.jergensinc.com. E-mail: info@jergensinc.com.
Does your Products Liability Insurance have your business hanging by a thread?

Most other insurance companies are raising rates or non-renewing coverage... SIGNAL is the stable choice.

SELECT INSURANCE GROUP OF NORTH AMERICA, LTD.
Hamilton, Bermuda
Managed by:
Meadowbrook Risk Management,
Hamilton, Bermuda, (441) 292-7569
For more information, contact:
Bernie Martin (415) 285-1954 or michelle.lemoine@meadowbrook.com

In 1987, wire rope fabricators and distributors found it difficult to obtain adequate products liability insurance at consistent, affordable rates. That crisis prompted a group of wire rope fabricators and distributors to form their own insurance company—Select Insurance Group of North America, Ltd. (S.I.G.N.A.L.).

Facing similar conditions today, S.I.G.N.A.L. provides a stable insurance alternative to the traditional insurance market, and also offers stabilization. S.I.G.N.A.L. is the source for a competitive products liability insurance program with added value.

**SIGNAL Advantages:**
- Coverage Stability
- Competitive Premiums
- Focused Loss Prevention Service
- Responsive Claims Service
- Policyholder Owned
- Long Term Commitment

Gunnebo Johnson Corporation
The Complete Lifting Quality Resource

Gunnebo Johnson Corp. is constantly striving to provide new innovations and advantages to our customers. We offered the industry’s first 3 Year Crane Block Warranty, Standard J-Latch, Reeling Guides, ForgeFab Sheaves, and now the “Quick Reeve” Crane Block.

The Johnson name is known worldwide for the highest standards in quality components and custom engineering design.

Reaching New Heights With Harrington

Harrington’s CF hand chain hoists are the most reliable yet economical hand chain hoists on the market today. These hoists are used in thousands of applications in commercial, industrial, maintenance and construction industries. Whether you are building a bridge or a ship, planning a power plant outage or pulling a generator for maintenance and repair, these hoists have the portability and ease-of-rigging needed to efficiently get the job done.

- CF Model capacities 1/2 Ton through 5 Ton
- Rugged die-cast aluminum body provides exceptional strength
- Pre-lubricated sealed ball bearings for long life and low maintenance
- Weston-style load brakes for positive braking action
- Designed with fewer parts to simplify maintenance

Join the Revolution and visit us at www.harringtonhoists.com
Eriez® offers the widest selection of compact permanent lift magnets. SafeHold® is available in four different styles to meet any price or performance requirement. Safely lift up to 10,000 lbs with a 2:1 safety factor.

Tax Code Changes Impact Business

Be Informed Before Filing Your 2008 Returns

The taxman cometh. With April 15 right around the corner, now is the time to get up to speed on the changes to the tax code that will impact your tax return this year.

Two significant Chamber-supported laws enacted last year—along with other updates and changes to the tax code—have created new and extended tax benefits for individuals and small businesses, according to the IRS.

The following are new for tax year 2008:

- **Increased Section 179 expensing limits.** For tax year 2008, the maximum Section 179 deduction is increased to $250,000, up from $125,000.

- **Special depreciation allowance.** Businesses that acquired and began using new qualified equipment in 2008 can deduct an additional 50% of the cost of the qualifying assets in the first year of use.

- **New depreciation limits on business vehicles.** Generally, the depreciation deduction a business can take for a passenger vehicle placed into service in 2008 is $2,960. However, if the bonus depreciation requirements were met, the deduction for a business vehicle is increased up to an additional $8,000 for a maximum depreciation deduction of $10,960 for 2008.

- **Increased alternative minimum tax (AMT) exemption.** The AMT exemption amount increased to $46,200 (or $69,950 married filing jointly) for 2008, up from $44,350 (or $66,250 married filing jointly) for 2007. The rise in the exemption level is anticipated to shield approximately 26 million taxpayers from the AMT.

- **Rise in amount of earnings subject to Social Security tax.** The maximum amount of net earnings subject to the Social Security part of the self-employment tax has increased to $102,000. All net earnings of at least $400 are subject to the Medicare part of the tax.

- **Bifurcated standard mileage rate.** This could be a tricky area for small businesses because the mileage rate changed midyear to reflect rising gas costs. For the period between January 1, 2008, and June 30, 2008, the standard mileage rate for the cost of operating your car for business is 50.5 cents per mile. For the period between July 1, 2008, and December 31, 2008, the standard rate is 58.5 cents per mile.

- **Expansion of the Work Opportunity Credit.** This credit has been extended to cover members of targeted groups who begin work before September 1, 2011. Also, the definitions of those included in qualified veterans groups and high-risk youth groups have been expanded.

The following are temporary tax provisions that were extended for 2008:

- **State and local general sales tax.** Taxpayers have the option of claiming an itemized deduction for state and local general sales taxes, instead of the itemized deduction for state and local income taxes.

- **Cost recovery for improvements.** There is a 15-year recovery period for qualified leasehold and qualified restaurant improvements placed in service in 2008 and 2009. Cost recovery was expanded to include qualified improvements by retail owners and new restaurant buildings placed in service from January 1, 2009, to December 31, 2009.

- **Disaster-related provisions.** Residents and businesses affected by the Midwestern floods are eligible for certain tax provisions, including a five-year carryback period for net operating losses and expensing of business-related costs incurred due to a federally declared disaster.

New Forms, Same Mistakes

Businesses must also contend with new forms and procedures for correcting the employment tax. If a taxpayer discovers errors after December 31, there’s a new series of forms to fill out. In another change, extensions for fiduciary and partnership tax returns were trimmed from six months to five months. There are also changes in terms of where taxpayers and preparers should file their returns.

Even taxpayers and preparers who are fully informed about changes in the tax code sometimes make common filing mistakes. Below are the most common ones, according to the IRS:

- **Unsigned returns**
- **Missing forms and schedules**
- **Use of the standard tax rate on qualified dividends and capital gains**
- **Invalid taxpayer addresses**
- **Use of the 944 annual federal employment tax return when a business should be using the quarterly 941 return**
- **S-corps that file the 1120S without having filed the 2553 election form**

The IRS has produced “Tax Talk Today,” a series of interactive programs in which tax preparers and businesses can interact directly with IRS officials and practicing professionals on tax issues. To learn more, go to www.taxtalktoday.com.

The “TOUR” will be on Monday and will consist of a special tour at the Bob Bullock Texas State History Museum. We will also experience the Texas Spirit Theater event entitled “The Star of Destiny”. Lunch is at the Moonshine Restaurant. The restaurant is an ideal introduction to the culinary adventures of Austin. Located in the Historic Waterloo Compound, Moonshine is steeped in the history of Austin, serving up innovative down-home cooking in a casual atmosphere that defines our city. It is a tribute to Austin’s past with great American cooking featuring a variety of beef, chicken and fish entrees, salads and more. After lunch options include shopping at The Domain, or return to the hotel. Bus will pick up shoppers for return at 3:00. Cost will be $90 per person.

Our “fun events” will be held in various locations. The Fun Run/Jog/Walk event fee is $50. The tennis fee is $85. The golf tournament will be played at the Onion Creek Golf Course and the fee is $135. (Please note, those wishing to sign up for the shuttle to the course must indicate by putting a “T” after their name on the sign up sheet.) RENTAL CLUBS ARE AVAILABLE. Please indicate on the tournament sheet if needed (there are a limited amount available at the Pro Shop.)
Spare Yourself Undue Stress

5 Ways to Manage Business Debt

With the economy in turmoil and millions of people losing their jobs, small businesses aren't being bailed out like America's elite. Business closings have reached epidemic proportions. While there's no way to protect your business from every storm, you can spare yourself undue stress by responding faster to unforeseen problems. To quote Benjamin Franklin: "An ounce of prevention is worth a pound of cure."

Monitor your cash flow.

Cash flow is not the same as profit. Your business may be profitable, yet you can still face a serious cash flow problem. Cash flow is determined by comparing the amount of money coming into your company with the amount of money going out. Ideally, you should have positive cash flow. If your cash flow is negative, you'll need to draw on your company's capital to stay current on your bills. When the necessary capital is not available, your debts accumulate.

Collect what's owed to you.

All the sales in the world won't help if you can't collect your money. Slow or nonpaying customers can be a big part of a cash flow problem. You need a formal system for billing and contacting your customers. If that doesn't work, contact a collection agency or attorney to help. Trying to collect from nonpaying customers can eat up time and money that could be better spent growing your business.

Eliminate or reduce expenses.

This is a tough but necessary step if your business is going to weather this economy. Here are some areas to look at.

Negotiate lower prices from existing vendors.

First, do your research. Find out who else offers the products and services you need. You'll be surprised to find that many companies are willing to lower their prices to gain a new customer. This will provide you with leverage to lower your current vendor's prices or simply buy from new vendors.

Negotiate extended payment terms. Perhaps more important than lowering vendor costs is negotiating a longer time to pay for the goods or services. When cash flow is tight, a 10% savings may not be as beneficial as an additional 90 days to pay.

Stop using your credit cards if possible. Credit cards enable you to extend payments over time; however, unless you have an extremely low interest rate and carry a low balance, your credit cards could spell trouble for you because interest rates can be astronomical.

Purge excess inventory, furniture, or equipment. If you need cash, you can return, auction, or liquidate things you don't need or haven't been able to sell.

Cut back on employees. It is extremely common for small business owners to keep employees they no longer need or don't need as much as they used to. If employees are not necessary, as much as it may hurt personally, cut back their hours or let them go.

Cut benefits. You may need to ask your employees to contribute more to their health insurance or phase it out altogether.

Relocate to a cheaper location. With a glut of unoccupied commercial real estate turning some areas into ghost towns, you should be able to find cheaper space nearby or renegotiate with your current landlord.

Consider raising your prices now.

Many small business owners undercharge for their services because they feel they have to match or beat their competitors' prices. But the days of undercutting everyone and turning your product or service into a commodity are over. Circuit City learned that lesson the hard way. Here's the cold fact: It doesn't matter how much you make—it matters how much you keep. If you have razor thin margins, it's time to change immediately. Just charging 10% more could make all the difference in the world. Test different prices. Look at other companies that are charging more for the same product or service.

Work your customer list.

We've worked with thousands of struggling businesses. Too many didn't have a customer list, and hardly any of the ones that did were marketing to them. If they were marketing, they had no way of measuring customer response. The worst part is that they had no idea which customers were primed to buy more or why they hadn't. If you don't have a customer list, create one today.

Jerry Silberman has 20 of experience helping small businesses reach affordable terms with their creditors and emerge from overwhelming debt within their means. He is currently founder and CEO of Corporate Turnaround, whose success stories have been profiled in The New York Times and BusinessWeek. Silberman has appeared on numerous media outlets as a featured expert and is co-author of the Small Business Survival Book. To learn more, visit www.CorporateTurnaround.com.

ARE YOUR TAGS AS TOUGH AS YOUR SLINGS?

Out of Service - SLING FAILURE

FIRST™ ID Tag

Out of Service - TAG FAILURE

Common Tagging

An Illegible Tag IS An Unusable Sling!

Synthetic Sling Identification System

FIRST™ Sling Technology offers the ONLY Synthetic Sling Tag available today that COMPLETELY protects ID information from abrasion and that STAYS ATTACHED to the sling.

System Benefits
Operations
- Quick and Clean Set Up and Production
- Secure Attachments
- Ease of Serialization and Barcode
- No Outdated ID Stock - Enhanced Availability
- No Cutting Needed - Efficient and Consistent Results

Sales and Marketing
- Product Perception - Professional Graphics and Custom Colors
- Special ID and Private Label Abilities
- Exceptional Traceability Standards
- Increased Useful Life - Cost Reduction
- Safety Support - Permanent Warnings, Metric Conversion, Bilingual
- UV Resistant

AWRF Endowment Fund Donation Form

The purpose of the AWRF Endowment Fund is to supply funds in perpetuity for the collection of the Wire Rope Industry Archives donated to the Arthur Lakes Library by the Associated Wire Rope Fabricators. All monies deposited in the fund are kept intact. Only the interest generated, year after year, is used for expenses. By making a contribution to the Fund, you are giving a gift to those interested in wire rope over and over again. Your donation may be tax-deductible. Cash, check or credit card is acceptable.

The AWRF Endowment Fund is administered by the Colorado School of Mines Foundation, in accordance with the organization’s bylaws. Once a year the interest is gifted to the Arthur Lakes Library. The professional staff of the library then decides how best to spend the money.

the country. Aside from its location in the beautiful hill country of Texas (the weather in April is usually lovely); Austin has a lot to offer. For the golfers, especially the ones from “up North”, there are many challenging venues available that should be in superb condition by then.

For those of you who like the outdoors, you are coming during the height of Bluebonnet season. If we ever see rain again in Texas, you will see acres and acres of blue lupines surrounding the city.

With almost 10% of its population either being enrolled or working at the UT Austin campus, there is a vibrant cultural scene and nightlife in Austin. Since the newly renovated Hilton Hotel is right in city center, you will be close to an abundance of restaurants, clubs, museums and parks. For more information on events at the time of the meeting, recreational options or restaurant suggestions, try www.austin360.com.

Your Board is very conscious of these more difficult economic times and we are happy to have been able to reduce the convention registration fees for this meeting. In spite of the lower cost, we have some interesting technical presentations on the agenda for you, covering Wire Rope Inspections, Crane Accidents and a Profit Planning session with Dr. Al Bates.

As you can see, this Board is determined to offer an ever increasing amount of information and services to you, as members. We are always looking for your input and direction for new avenues to explore. You can reach any Board Member via the contact information listed in every Slingmakers, or talk to any one of us at a meeting. We want to be accessible to you.

Membership in the AWRF might give you that little edge, that little bit of knowledge, or access to information, that helps you succeed in business. That is our goal.

I am looking forward to seeing all of you at our April meeting in Austin,

Michael Rothermund
President - AWRF
BLOCKS
8 to 1,000 tons
- Crane Blocks - Snatch Blocks
- Travelling Blocks - Fast Reeve and Standard
